

AI, automation and distributed operations

DudeWorth

Founder / AI and Automation Advisor

2017-Present

- Develops AI-readiness and opportunity frameworks that assess value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value.

- Designs agentic workflow patterns using structured context, retrieval, AI agents, human judgment, escalation, decision records, evaluation, and governance rails.

- Advises on AI-enabled operations, logistics technology, warehouse automation, AMRs, ASRS, cobots, transportation systems, network analysis, and workflow design.

Cardinal Building Products

Regional Director

2021-2023

- Built the company's first remote regional operation and modernized distributed customer, CRM, commercial, fulfillment, logistics, digital marketing, SEO, and online-buying workflows.

- Advanced AI-enhanced transportation-management and route-planning concepts.

| Technical toolkit                                                                                                                                                                                                   | Operating methods                                                                                                                                                                                                 |

Technical leadership and education

IEEE - CMPT and EDS Pittsburgh Chapter | Chapter Chair | 2012-2016

Led regional technology programming connecting industry, academia, electronics, manufacturing, STEM outreach, and emerging technology through conferences, seminars, technical programming, and business tours.

University of Pittsburgh | Bachelor of Science

Academic grounding includes materials science, physical chemistry, and biology-related studies. Academic work is indexed at Google Scholar.

Credentials: Google AI Essentials | IBM Enterprise Design Thinking Practitioner | Six Sigma Certification | OSHA 10

Selected technical contributions

|                                                                                                                                                             |                                                                                                                                                                       |

LATITUDE AI CONTRIBUTION PROFILE

Immediate value:

cross-domain integration triage, Python-enabled tooling, reproducible problem definition, evidence synthesis across hardware and software, configuration traceability, regression thinking, and clear partner-team communication.

Operating edge:

moves comfortably between system architecture, operating constraints, machine behavior, quality evidence, and ownership boundaries - then converts closure into tests, controls, and reusable mechanisms.
