

INTEGRATION CLOSURE RECORD

Russell Dudek | Latitude AI candidate vision

Use this record to align observed behavior, configuration, evidence, ownership, repair, and release posture. Illustrative candidate artifact?not a representation of Latitude AI internal process.

1. OBSERVED BEHAVIOR

What happened? Under what exact condition? What is the minimum reproducible condition?

2. EXPECTED INVARIANT

What must remain true across software, hardware, timing, data, calibration, configuration, or ownership?

3. EVIDENCE + HYPOTHESES

What evidence exists? What is missing? Which result would discriminate among competing hypotheses?

4. NEXT EXPERIMENTS

Experiment 1 / expected evidence / interpretation. Experiment 2 / expected evidence / interpretation.

5. OWNERSHIP + RELEASE POSTURE

Who decides? Who contributes? What blocks release? What can continue, hold, or isolate?

6. REPAIR + RECURRENCE CONTROL

What changed? How was it verified? What regression test, configuration check, observability, interface contract, or standard work makes recurrence harder?

CLOSURE CHECK Reproduced | Invariant named | Configuration pinned | Repair verified | Regression/control added | Owner + release decision explicit
